

LAKES

of the

mount hood national forest

Glistening waters of over 150 lakes lie within the timbered boundaries of the Mt. Hood National Forest. Some of these lakes are easily accessible by car. Others bury themselves in the high country. On foot, or by horse, the sportsman must forge his way into these lakes to enjoy the solitude of the wilderness.

Most of these lakes were void of fish populations before the Department of Fish and Wildlife began an extensive stocking program. Heavily fished lakes are stocked annually, while more isolated lakes are planted every two or three years. Only those lakes that are fishable, either through stocking or natural reproduction, have been included in this guide. There are a number of other lakes which recreationists can enjoy, that do not contain game fish.

Fishing season opens in late spring, for those lakes in lower elevations. A later season is characteristic of the higher lakes, as snow often remains until July. Fishing regulations and season dates can change, so consulting a current Synopsis of Oregon Angling Regulations is advised. Also remember that you must possess a valid Oregon fishing license.

Preservation of the forest is in the hands of man, so please follow the regulations of the United States Forest Service and the Department of Fish and Wildlife. Be careful with matches, leave a dead fire, a clean camp, and be familiar with angling limits and regulations.

Nearly all maps which would be used to locate lakes in the forest are divided into Township, Range, and Section grids. The grid system for location identification is used by this guide.

Land maps are divided into 6-mile squares called TOWNSHIPS. Lines running east and west are Township lines. Lines running north and south are RANGE lines. These lines form 1-mile squares called SECTIONS. There are 36 Sections within one Township. Section #1 is always in the NE corner of the Township. Sections are numbered east to west, then west to east, until reaching the last Section in the SE corner, #36.
